

IQONIC.AI's Hair Analysis Tool: The In-Salon Experience

Our advanced hair analysis technology uses AI to deliver personalized product and service recommendations for optimal hair health. It assists hairdressers in consultations and provides valuable consumer insights for targeted marketing. In salons, it enables comprehensive 360° hair analysis through multi-angle pictures.

We help you create a unique salon experience for your clients!

High-resolution imaging captures intricate hair health details

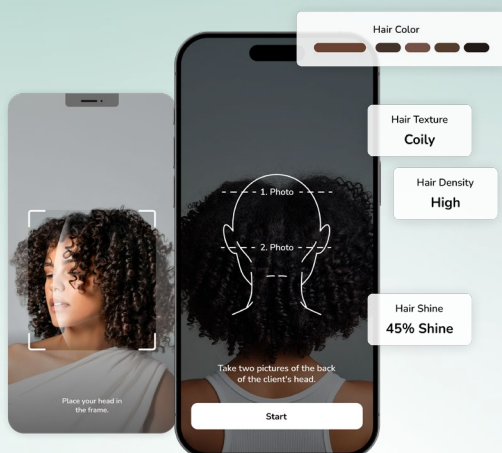

AI-powered algorithms analyze scanned data and evaluate your hair in detail

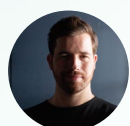

Personalized hair care plans are generated based on the results of the analysis

Here's how you can integrate it into your salon:

With IQONIC.AI, we've created a tool that simplifies and scales your consultation and sales process using AI, allowing you to quickly and easily present your portfolio to customers:

- Analyzing different images from different angles with AI & measuring various hair parameters: color, texture, density, shine and more.
- Helping your customers learn more about their individual hair care needs & make informed decisions through customized product & treatment information.
- Easy to implement into any digital device in the salon.
- Connectable to email or salon systems.
